

Guide to Hurricane Season

Welcome to Hurricane Season in Louisiana! We know this time of year is especially stressful, so we worked hard to make this *Imagine Water Works: Guide to Hurricane Season* as **trauma-informed**, **practical**, and **accurate** as possible.

We recognize that everyone in our region has different needs and levels of experience with storms. This is why we cover a wide range of prep options, including special considerations for **COVID-19** and for **Queer and Trans Folks**. Consider this a “choose your own adventure” version of a hurricane guide — we keep it simple while providing as many details as possible. You decide what you need to focus on and, hopefully, are able to have some peace of mind. Now, on to the guide!

Start here.

The **Quick + Dirty Checklist** below should help you make sure you’ve covered the basics. If you haven’t done each of these things or need more information on a particular step, read on to the next section:

- ❑ **Who are your primary emergency contacts, both locally and out-of-state?**
Make a list and check in with them.
- ❑ **Who are your neighbors? Say hello!**
Exchange contact information and plans if you feel comfortable doing so - you may have supplies (flashlights, a ladder, boats) that can be shared in the event of an emergency.
- ❑ **Where will you park your car in the event of street flooding?**
Pay attention to where the ground stays dry in your neighborhood during thunderstorms. Parking restrictions are lifted during storms, so this may include the neutral ground.
- ❑ **Have you cleaned out your block’s storm drain, including the ground around it?**
Take a shovel, gloves, and trash bags to clear out any leaves, trash, or debris that might keep the water from draining. *For more information, go to Page 11.*
- ❑ **Have you secured your trash/recycling bins and any outside furniture, plants, etc.?**
Move them to a safe place indoors or tie them down.

❑ Is your home secure or are there any leaks from windows or roof?

If you've noticed any leaks, consider patching them or use the trusty old-fashioned method of placing a bucket or bowl in this location. If you can, consider closing shutters or using plywood to cover openings if the winds are projected to be strong. *For more home tips, go to Page 10.*

❑ Have you gathered survival supplies that will keep you safe?

This includes food, water, and tools. *For a longer list of supplies, go to Page 8.*

❑ Do you have cash on-hand in case ATMs go down for days?

We recommend at least \$250, if possible. *For more info, go to Page 5.*

❑ Have you taken photographs/video of your home to document items that can be replaced by insurance?

Walk through your home using your phone's camera/video to document the condition of your space and any valuable items that could be damaged. *For insurance info, go to Page 11.*

❑ Have you created your own "Grab + Go" box, complete with valuables like important documents, jewelry, and artwork?

Make a list of what can't be replaced so that it's easy to pack. *For suggestions, go to Page 6.*

❑ Have you made an evacuation plan?

Include local, regional, and out of state options - where you evacuate will depend on the direction and strength of the storm.

❑ Is your car ready for a long trip?

Fill your tank, check your tires and oil, and make sure your car battery is working.

❑ If you do not have reliable transportation in the event of a mandatory evacuation, have you enrolled in the City-Assisted Evacuation Program?

Text **EVACNOLA to 888777** if you might need to use City-Assisted Evacuation. The City of New Orleans will text you if there is a mandatory evacuation. *For more info, go to Page 12.*

❑ Do you have any medical needs or will you require assistance during an emergency?

The City of New Orleans has a "Special Needs Registry" - you can register if you use life support systems, are insulin dependent, have trouble walking, are blind, deaf or hard of hearing, have speech, developmental, or mental health disabilities, use service animals, are pregnant, or have other medical needs that mean you might require assistance. Register by calling 311 or at <https://specialneeds.nola.gov/>.

❑ Do you have a plan for your pets?

Decide now whether you can evacuate with your pets. Make sure you have enough food, medicine, and supplies to keep them safe. *For feedback from our pets, go to Page 8...*

Quick + Dirty Checklist: COVID ADDENDUM

- ❑ Who is in your “pod” i.e. who are you already quarantining with and is this who you would ride out a storm and/or evacuate with?
- ❑ Will you be sheltering-in-place or evacuating with people who are immunocompromised and/or especially susceptible to COVID?
 - ❑ If you are at high risk for severe illness from COVID-19 (i.e. if you are a senior or have existing medical conditions) AND you need evacuation assistance, sign up for the City’s Special Needs Registry.
- ❑ Where will you go if you have to evacuate? Would you be staying with people who are immunocompromised and/or especially susceptible to COVID?

Are you someone who likes more details and step-by-step plans? Worried about COVID-19?

We got you! Keep on reading.

Now that you’ve thought through the **Quick + Dirty Checklist**, it’s time to review some additional information for anything that you may have had questions about. Here’s where we’ll include special considerations for **COVID-19** and for **Queer and Trans Folks** in color-coded text boxes, in addition to general hurricane season tips. *You’ll also see personal tips and quotes from New Orleanians in boxes throughout the guide.*

You ready? Let’s start with some special considerations. Here goes:

COVID-19 CONSIDERATIONS

COVID presents extra challenges during hurricane season. Please consider the following changes to your usual hurricane prep:

- ❑ Even if you’ve done this before, your plans may need to be updated. Your circumstances may have changed: financially, who you feel safe evacuating with, and/or where you might feel safe going.
- ❑ Evacuation will take longer; leave extra time to get out of town. See the green box near the end of this guide for extensive information about evacuating during COVID.
- ❑ Supplies may be less available. Try to stock up a little at a time as part of your regular shopping trips/orders to avoid making a big store run at the last minute.

QUEER AND TRANS CONSIDERATIONS

Our entire team identifies as part of the LGBTQ community. Given that queer and transgender folks (QTs!) face specific health and safety barriers during times of crisis, we launched our first guide in 2017 specifically for our community. We include QT-specific information throughout this guide as well, drawing upon the expertise and lived experiences of QT folks from New Orleans — so look for the boxes that are this color! These tips are by us and for us.

First things first...

Take a deep breath. It will help your brain and keep you grounded. You got this.

And then...

Gather your people. Who are your friends/family (chosen and related!) and do y'all have a plan? Who are your neighbors? Do you have each other's emergency contact information? Reach out to folks in town and friends in other locations who might be able to host you in case of an evacuation.

Laura's Tips for Emergency Contacts

"It's a good idea to designate people as emergency contacts in case someone isn't responsive... and to provide other folks with trusted friends/relatives' contact info. For example, my mom has my best friend's phone number and my boyfriend's mom's phone number as well."

COVID CONSIDERATION

When checking on neighbors and friends, be sure to follow [social distancing](#) recommendations (stay 6 feet apart) and [other CDC recommendations](#) to protect yourself and others.

Now you can...

Make a Plan. Things to think about:

1. **Elevation:** Who lives in an elevated house, ideally close to the levees or high ground (aka 9th Ward, French Quarter, "Sliver by the River," or near Esplanade Ridge)?
 - a. Shelter in place together in the safest house. If evacuating but low on space, consider storing valuables in the safest possible location.

- b. If you'd like to check your location's estimated flood risk, see how flood risk has changed over time, and see your location's estimated flood depth during a 1% annual chance flood (*aka* 100-year flood), click [here](#). But remember: There's no substitute for observing your own block during regular rain events!

2. **Drinking Water:** Do you have extra potable water in case there's a boil water alert?

- a. The rule of thumb is to have at least 1 gallon of water for each person and pet for at least 3 days. Consider storing extra water, given how hot it is in Louisiana, and extra water for pregnant people or people who are sick. If possible, try to store a 2-week supply.

Monique's Watery Pro Tip

"Before the storm hits, I always fill my bathtub to the top. If the water supply is affected, we use the tub water to flush toilets and wash up. I also like to fill up reusable water bottles, jugs, or mason jars in case of a boil water alert... which sometimes happens when the power goes out."

- b. Store a bottle of unscented liquid household chlorine bleach to disinfect your water and to use for general cleaning and sanitizing.

Grant's Tips for Drinking Water

"I keep 2-3 gallons of filtered water under the sink. I replace the water each week, using it to water plants, so that I'm never without clean, filtered water. I have a Berkey water filter, which they claim can even filter river water in a pinch. I love that it's portable, and I've brought it with me on more than one evacuation."

3. **Transportation:** Who has a car that can evacuate safely out of town?

- a. Do you have enough spots in this car to get other people out? What about pets?
- b. Do you need to do anything to make your car evacuation ready? Does it need an oil change? Air in the tires? Do your windshield wipers work? Do you have a full tank of gas? If riding with a friend, can you offer to help with any of these things?
- c. If you don't have access to a car, check out the [City-Assisted Evacuation program](#) or text **EVACNOLA to 888777** to get a ride out of town. (Look for more extensive information about City Assisted Evacuation near the end of this guide.)

4. **Emergency Funds:** Do you have any cash you can set aside as an emergency fund? Can you pool your cash together with a friend?

- a. ATMs and credit cards may not work for several days if there's a major event. If possible, you'll want to withdraw cash well before the storm hits.

- b. At minimum, we recommend having enough cash for two tanks of gas and a hotel room if need be: around \$250.
5. **Emergency Packing:** What is most precious to you and could not be easily replaced? What do you need for survival?
- a. Family photos, legal paperwork, computer, journals, artwork, jewelry, etc.
 - b. What can you scan/photograph to save digitally, preferably to “the cloud”? What do you need hard copies of?

Alessandra’s Advice for Kids

“If you’re evacuating with kids, make sure to tell them what’s going on. It doesn’t have to be scary, just that there might be a storm, so we’re going to leave for a day or two. Also, make sure you have something fun and something comforting in a little evacuation activity bag for them.”

6. **Leaving:** Where will you go?
- a. Evacuation locations may differ depending on the path of the storm.
 - b. Think about 2-3 places you could go to, depending on how long you will be gone for and how far inland you should go.

Miriam’s Evacuation Plan

“If I’m worried about heavy rainfall, I’ll shelter in place at my house close to the levee in the Lower 9th Ward. If it’s a tropical storm or a Category 1 or 2 hurricane, I’ll likely go to stay with family on the North Shore. If it’s a Category 3, 4, or 5 hurricane, I’ll likely go to Jackson or Atlanta, depending on the expected path. My friends and I keep in text touch to check on each other’s evacuation needs. If we’re evacuating, my dog and cat are coming with me, along with my Go Bag!”

Feeling a little better?

If you’ve got the time or feel better being even more prepared, there’s more:

1. **Pack a Grab + Go Box:** This is useful, regardless of whether you stay or evacuate.
 - a. **Get a waterproof container:** A plastic storage bin works well, though you may want to check how well it seals shut. Ziplock bags work, too. If you’re able, you can also purchase water/fire proof bags online for around \$10-\$40.
Fill your container with...

- b. **IDs** (license/state ID, passports, birth certificates, SSN card, immigration documents. You can also take photos, make copies, or store your license digitally through the state approved [LA Wallet](#) app for \$5.99.)
- c. **Medicines and/or prescription info** (Store up an extra bit of any vital meds, contact lenses, menstruation supplies)
- d. **House papers** (lease, house deeds, insurance)
- e. **Car papers** (car title, registration, insurance cards)
- f. **Bank stuff** (tax forms, checkbooks, ATM cards, credit cards)
- g. **Chargers** (external battery pack for your phone and car charger)

Klie's Power/Charger Pro Tips

"When a storm is coming, I start charging everything asap! First, I plug in my phone's portable battery pack to get it fully ready. You can buy those pretty cheap on the internet these days.

When the storm gets closer, I turn off my laptop and leave it plugged into a surge protector 100% of the time so that I'll have a full charge when the power goes out. That way, when my phone's battery dies (and the backup pack runs out of charge too), I can use the USB port on my laptop to get another couple of charges in. Last, I track down my car charger. Over the years, I've charged lots of phones in cars when the power's out..."

- h. **Pet papers** (vaccine info, recent vet paperwork)
- i. **Education docs** (i.e. student transcripts, report cards, etc.)
- j. **First aid kit**

QT PACKING TIPS

- Any additional paperwork (i.e. a printed copy of your name change documentation, receipts from any gender affirming surgeries, your WPATH surgery letter)
- Syringes for HRT, PrEP, Antiretrovirals
- Special clothing and gender essential items (tucking gaffs, chest binders, packers, wigs, clippers/razors, makeup, wax kits, padded bras)

COVID-19 PACKING AND PREP

- Make sure you have face masks, hand sanitizer, and disinfectants in your home kit to prevent the spread during recovery activities.
- Pack face masks, hand sanitizer, and disinfectants in your go-bag to prevent the spread while you are evacuated.
- With folks staying home more, your car may have been sitting still for longer than it normally would. Double check to make sure your car battery is fully charged.

2. Gather Supplies for Staying or Going:

- a. **Toiletries:** soap, shampoo, toilet paper, wipes, contacts, eyeglasses
- b. **Pets:** food, medication (get extra if possible!), leash/crate, toys, bedding

Gus and Turkey's Pet Evacuation Tips

*"I love going in the car! Just remember my bed, food, water, treats, and special toy!"
- Gus, Age 9, Terrier Mix*

"I hate going in cars. Be sure to leave enough time to get me in my carrier, because I will try to hide and fight you. Calming treats and a soft blanket may help. Don't forget my litterbox and catnip! I'm still going to be mad." - Turkey, Age 10, Black Cat

- c. **Flashlights and Candles:** make sure you have batteries or lighters
- d. **Radio:** battery operated
- e. **Clothing:** light and comfortable layers and shoes

Klie's "It's Hot Out There" Clothing Advice (and a QT Tip!)

"One of the things that I remember most about Hurricane Katrina is how hot we were with the power out for so long... everyone in our apartment basically stripped down and laid on the tile floor to keep as cool as possible.

For folks who might be less comfortable doing this, I'd recommend finding the coolest clothing possible. For example, it's hard to feel super exposed when you're having anxiety or body dysphoria."

- f. **Infant Supplies:** food/formula, diapers, and other essential items
- g. **Food:** three-day supply of food per person
- h. **Water:** drinkable water at 1 gallon per person per day
- i. **Tools:** screwdriver, hammer, knife, rope, bungee cords

Don's Shelter In Place Tool Tip

"I'm old school, but we've always stayed home and kept an axe in the attic. If the water rises and you get stuck somewhere, an axe can save your life."

- j. **Liquor/wine/cigarettes:** Whatever you need to help cope with stress. We grew up with hurricane parties — no judgment!
- k. **Fun:** an instrument if you have room for it, cards, books, anything to keep you calm + entertained through power outages

Whew, that was a lot! Time for self care...

Don't skip this step!

It's important that we remain as calm as possible during times of crisis — it not only feels better, but it helps us make quick decisions with a clear mind. It also helps us be more kind and patient with those around us. Here are a few things you can do to take care of yourself.

1. Remember to breathe.

Want a GIF to help practice breathing? [We recommend this one.](#)

2. Ask for support/give support.

Your people have your back. If you're in New Orleans or Houma, you can offer or ask for specific support in our [Imagine Mutual Aid Facebook groups](#).

a. White folks and newer residents, it's time to step up to support BIPOC (Black / Indigenous / People of Color) and native New Orleanians.

If you aren't experiencing Katrina PTSD, how can you support those who are having a hard time?

Laura on Offering Support

"I'm happy to help! There are several ways I can think of to check in and offer help to my New Orleanian native neighbors. I have a car, so I can offer a space or two to folks who need a ride out of town. I can also help folks by offering up any extra non-perishables I have... and can babysit if they need a few hours to relax or storm prep. I've got tools people can borrow, and I can help my neighbors board up windows and doors.

And for my older folks, I can help make copies of documents. If they have a cell phone, I can team 'em how to text and how to save family + friends' phone numbers as favorites to access them quickly."

b. Anything else?

Do you need medication/self-care supplies? Contraceptives? Over-the-Counter meds? Vitamines? Insulin? Bath salts? Candles? Don't forget to sleep!

Home Sweet Home...

1. Preparing your home for wind and water:

a. Could rain get in through windows, doors, holes in the roof?

Do what you can to caulk them now. Use a tarp if needed.

b. Unplug electronics: If things need to remain plugged in, use a surge protector.

c. Elevate, wrap, and move valuables to higher ground or an alternate location (e.g. carpets, electronics, and furniture).

d. Eat or toss any meat products from the fridge/freezer.

Anonymous Food Safety Tip

"The coin trick! Fill a cup of water, and freeze it. After it's frozen, put a coin on top. If the power goes out for a long time while you're away, the water in your cup will melt and the coin will sink to the bottom. That way, you'll know whether your food is safe to eat when you come back home."

e. Clean out gutters and downspouts, allow water to flow away from your home.

f. Prepare sandbags using [these steps](#) to ensure they don't topple. (Don't forget to review safe disposal guidelines later.)

i. If you can't find sandbags, you can always use potting soil instead. After the storm passes, you can repurpose it by using it in the garden!

ii. Use trash bags and/or tarps to prevent leakage.

g. Secure cleanup materials like masks, gloves, mops, buckets, and bleach.

h. Take photos of your property and belongings. Make sure the photos are time-stamped - you can include a copy of the front page of today's newspaper.

Storage Advice from Locals

"In a pinch, you can buy Ziploc Storage Bags with Double Zipper or Rubbermaid tubs with locking lids. You can place things on top of counters, kitchen tables, or in the attic to keep them up high, or bring them in the car if you decide to evacuate. If you're leaving things behind and want to be extra careful, you can use Ziploc bags inside of sealed storage bins."

"In a pinch, you can dry out your dishwasher and use it as a waterproof place to store things from floodwaters."

3. Securing outside your home:

- a. **Secure trash/recycling cans and any outside items:** patio furniture, plants, anything that could blow away or become a projectile in strong winds.
- b. **Clean out storm drains!** If your catch basin/storm drain near your house is clogged, the water won't drain.
 - i. Take 15 minutes to remove trash, leaves, grass, and other visible debris from in front of catch basin openings. Place lawn debris in garbage cans — never blow or sweep grass down a catch basin. Use gloves + a rake/shovel if necessary.
 - ii. Call 311 to report catch basins that are not fully functioning.
 - iii. Avoid lifting a catch basin lid or inserting anything into a catch basin.
 - iv. To reduce risk of street flooding, do not park in front of or on a storm drain!
- c. **Pick up trash:** Clear anything that could clog catch basins, including trash from nearby sidewalks or lawns. Water flows and will carry loose trash to the drain.
- d. **Buy insurance:** Homeowners, renters, and flood insurance policies are the most effective financial recovery tools currently available. Flood insurance is a separate policy and requires a **30-day waiting period**. It's likely that you won't be able to add a flood policy or change any of your regular policy coverage if there's a hurricane on the way, but you should still contact your agent or company in advance in order to:
 - i. Understand your policy limits, co-pays, deductibles, and where to call with any claims will come in handy if you are affected by the storm.
 - ii. For more information, visit www.flash.org, email info@flash.org, follow [@FederalAlliance](https://twitter.com/FederalAlliance) on Twitter, follow FLASH on [Facebook](https://www.facebook.com/FLASH), or call (877) 221-SAFE (7233).

We're getting there!

The next section provides extensive details on City Assisted Evacuation + Self Evacuation during COVID-19.

Source: NOLA READY

<https://ready.nola.gov/plan/hurricane/>

EVACUATING DURING COVID-19

Evacuating for a hurricane is already stressful. Below are some considerations for staying safe in an evacuation during the COVID-19 pandemic.

Please note that this information is provided by the City. While we are happy to talk with folks and share what we've learned, **we are not affiliated with the City or NOLAReady.**

Evacuating to a shelter:

- Evacuation routes, shelter locations, and local plans may have changed - check NOLAReady for the latest local information.
- Bring items that can help protect you and others in the shelter, including: hand sanitizer, cleaning materials, and two cloth face coverings per person.
- Children under 2 years old and people who have trouble breathing should not wear cloth face coverings.
- While at the shelter, be sure to wash your hands regularly.
- If possible, be sure to maintain a physical distance of at least 6 feet of space between you and people who aren't members of your household.

Evacuating with the New Orleans City-Assisted Evacuation program:

- If you do not have transportation and plan to use the City-Assisted Evacuation Program, note that this will also change due to COVID-19. Text EVACNOLA to 888777 if you might need to use City-Assisted Evacuation.
- If there is a mandatory evacuation, the City will activate the City-Assisted Evacuation program to provide transportation out of town for folks without cars.

- ❑ Due to COVID-19, evacuations may need to take place sooner (buses will be half-full to allow for more social distancing). Pay attention to official warnings during hurricane season and be prepared to leave quickly if a mandatory evacuation is ordered.

How City Assisted Evacuation Works:

- ❑ There are 17 pickup locations throughout the city known as “evacuspots” that are designated with a big silver stick-figure sculpture (see above image). You can also find spots by looking at [this map on ready.nola.gov](#).
- ❑ Five of the pickup locations are specifically for seniors, and if you can’t get to an evacuspot because of medical needs, you may be eligible for pickup at your home through the [Special Needs Registry](#). This includes folks who are at high risk due to COVID-19.
- ❑ All evacuees must wear masks. They will be provided if necessary.
- ❑ During a mandatory evacuation, go to your closest evacuspot. A bus will take you from there to the Smoothie King Center. To the greatest extent possible, social distancing measures will be in place at evacuspots and at the Smoothie King Center. From there, you will board another bus or train to a shelter outside of the city.
- ❑ The State of Louisiana is securing additional shelters throughout the state to allow for more social distancing.
- ❑ Families will be kept together to the greatest extent possible.
- ❑ Once it’s safe to return, the City will bring you back, either to a local shelter or to your home.

Additional Information:

- ❑ You’re allowed to evacuate with your pets!
Just bring an ID collar, leash, medications, and a carrier with you to the evacuspot. Pets that are smaller than 20 lbs can ride with you on the bus. Larger pets will be taken to the Union Passenger Terminal by the LSPCA. Your pet will be registered with you, and will travel to the same shelter, where you will care for them.
- ❑ If there is a mandatory evacuation, you must leave town.
The threat due to a hurricane could be greater than the threat of COVID-19. Minimize the risk of illness by wearing masks, maintaining social distance (6 feet), washing your hands and using hand sanitizer regularly, and disinfecting surfaces.

Evacuating on your own:

- ❑ Add 2 cloth face coverings for each family member
- ❑ Pack cleaning supplies, including soap, hand sanitizer, disinfecting wipes, and general household cleaning supplies to disinfect surfaces.
- ❑ Note: After a hurricane, you may not be able to access supplies for days or even weeks. Prepare now so that you have what you need in an emergency. As you prepare, remember that not everyone can afford to stock up, especially due to job losses during the pandemic. If

you can afford to, making essential purchases in advance allows for longer periods of time between shopping trips and helps those who are unable to buy essentials in advance.

What to expect from emergency officials due to COVID-19:

- ❑ FEMA will generally have fewer emergency personnel. This may impact the amount and speed of aid available — plan accordingly, where possible.
- ❑ Shelters and other emergency locations may have additional health/safety precautions, including: temperature and health screenings, increased cleaning and disinfection requirements, and reduced personnel for social distancing.

Sources: [NOLA READY Evacuate](#), [FEMA COVID-19 Pandemic Operational Guidance for the 2020 Hurricane Season](#), and [CDC's Going to a Public Disaster Shelter During the COVID-19 Pandemic](#)

What comes next?

1. If it floods and you have not evacuated:

a. Shelter in Place During Heavy Rainfall.

It is very dangerous to leave during heavy rainfall. During a storm, residents will be allowed to park on the neutral ground and sidewalks, as long as vehicles do not block intersections or streetcar tracks. Move your car beforehand and then stay put.

b. Don't Drive.

Driving through a flooded area can be extremely dangerous. Stay safe when in your car by watching for flooding in low lying areas, especially at bridges and highway dips. As little as six inches of water can cause you to lose control of your vehicle.

IF YOUR CAR TAKES ON WATER...

DON'T TRY TO START IT.

BEGIN DRYING OUT YOUR INTERIOR ASAP.

CONTACT A TOWING SERVICE TO GET IT BACK TO HIGHER GROUND, IF NECESSARY.

CHECK THE OIL DIPSTICK FOR WATER DROPLETS.

CHANGE THE OIL AND TRANSMISSION FLUID.

CHECK ELECTRICAL COMPONENTS.

CHECK THE FUEL TANK AND LINE.

@waterworkslla // @waterworksola
WATERWORKSNOLA.COM

2. If your home flooded:

a. **Wear an N-95 mask and gloves** - be careful when reentering your property!

b. **Watch out for any electrical wires that may be damaged, gas leaks, or other hazards** when entering the property.

c. **If your drywall got wet**, keep the walls open until they are completely dry to avoid mold. Remove vinyl wallpaper, which can trap moisture, and wear an N-95 mask to protect from mold.

d. Before you repair or rebuild, consider the following:

- iii. Document all damage for insurance or assistance claims.
- iv. Move electrical outlets and breaker boxes above expected flood level.
- v. Replace drywall or gypsum wallboard with a flood resistant material, such as wood paneling, tile, or marine-grade plywood.
- vi. Select insulation that can be protected or easily replaced. FEMA recommends using rigid foam board insulation.
- vii. Elevate your water heater, A/C unit, and washer/dryer on a platform or cinder blocks.
- viii. Replace carpet with waterproof flooring such as tiles, brick, vinyl, stained concrete, terrazzo, or solid wood planks.

e. Remember, you may need a permit to repair damages to your home. Check with local officials and insurance agents before beginning repairs.
